

Corabit Curbstone mastic

GENERAL INFORMATION

Corabit[®] curbstone mastic is a plastic joint mastic, based on bitumen for filling curbstone- and other joints, for example between steps and concrete components on standing terraces in stadiums, sport arenas and the like.

- Cold applied
- Stable for vertical use, even at high summer temperatures

Stress, due to temperature change or ground motion can be absorbed as far as possible.

APPLICATION INSTRUCTION

The dry and clean joint flanks have to be primed with **Corabit[®] FB-Primer**. The curing time depends on the weather conditions but should at least be 30 minutes. It has to be assured that all solvents could exhale completely to achieve a sufficient bonding. Afterwards the mastic must be pushed in the joints and be straightened with a trowel and a jointing iron.

It's recommended to wet the jointing iron with lukewarm water during the application.

The maximum joint width is 20 mm.

FORMS OF DELIVERY

Corabit[®] curbstone mastic:

Containers 20 kg
Containers per pallet 33 units

Store in a dry and cool space.

Transportation instructions according to the relevant requirements.

CONSUMPTION

The consumption is approx. 1,5 kg/l joint space
